Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>	
	10/517,902	ROSENBERG ET AL.	
	<b>Examiner</b>	<b>Art Unit</b>	
	Tung X. Le	2821	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on amendment submitted 4/2/2007.
- 2a) This action is FINAL.      2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 1-18 is/are pending in the application.
  - 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) Claim(s) \_\_\_\_\_ is/are allowed.
- 6) Claim(s) 1-9 and 11-18 is/are rejected.
- 7) Claim(s) 10 is/are objected to.
- 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on \_\_\_\_\_ is/are: a) accepted or b) objected to by the Examiner.  
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
  - a) All    b) Some \* c) None of:
    1. Certified copies of the priority documents have been received.
    2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
    3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

#### Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
 Paper No(s)/Mail Date \_\_\_\_\_.
- 4) Interview Summary (PTO-413)  
 Paper No(s)/Mail Date. \_\_\_\_\_.
- 5) Notice of Informal Patent Application (PTO-152)
- 6) Other: \_\_\_\_\_.

**DETAILED ACTION**

1. This is a response to the Applicant's amendment submitted on April 02, 2007; and claims 17-18 are newly added and claims 1-18 are presented in the instant application.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1, 11-12, and 17-18 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Regarding claims 1 and 11-12, the new limitations have been added and recited as "wherein the ground plane extender is a separate piece from the ground plane". However, these new limitations are not supported or indicated in the drawings and the specification; there are no elements pointed out a ground plane extender being separated from the ground plane in the drawings; and there are no words in the specification pointed out the separated ground planes between the ground plane and the ground plane extender. Thus, Examiner does not understand the purpose of the new limitations in the claimed invention.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

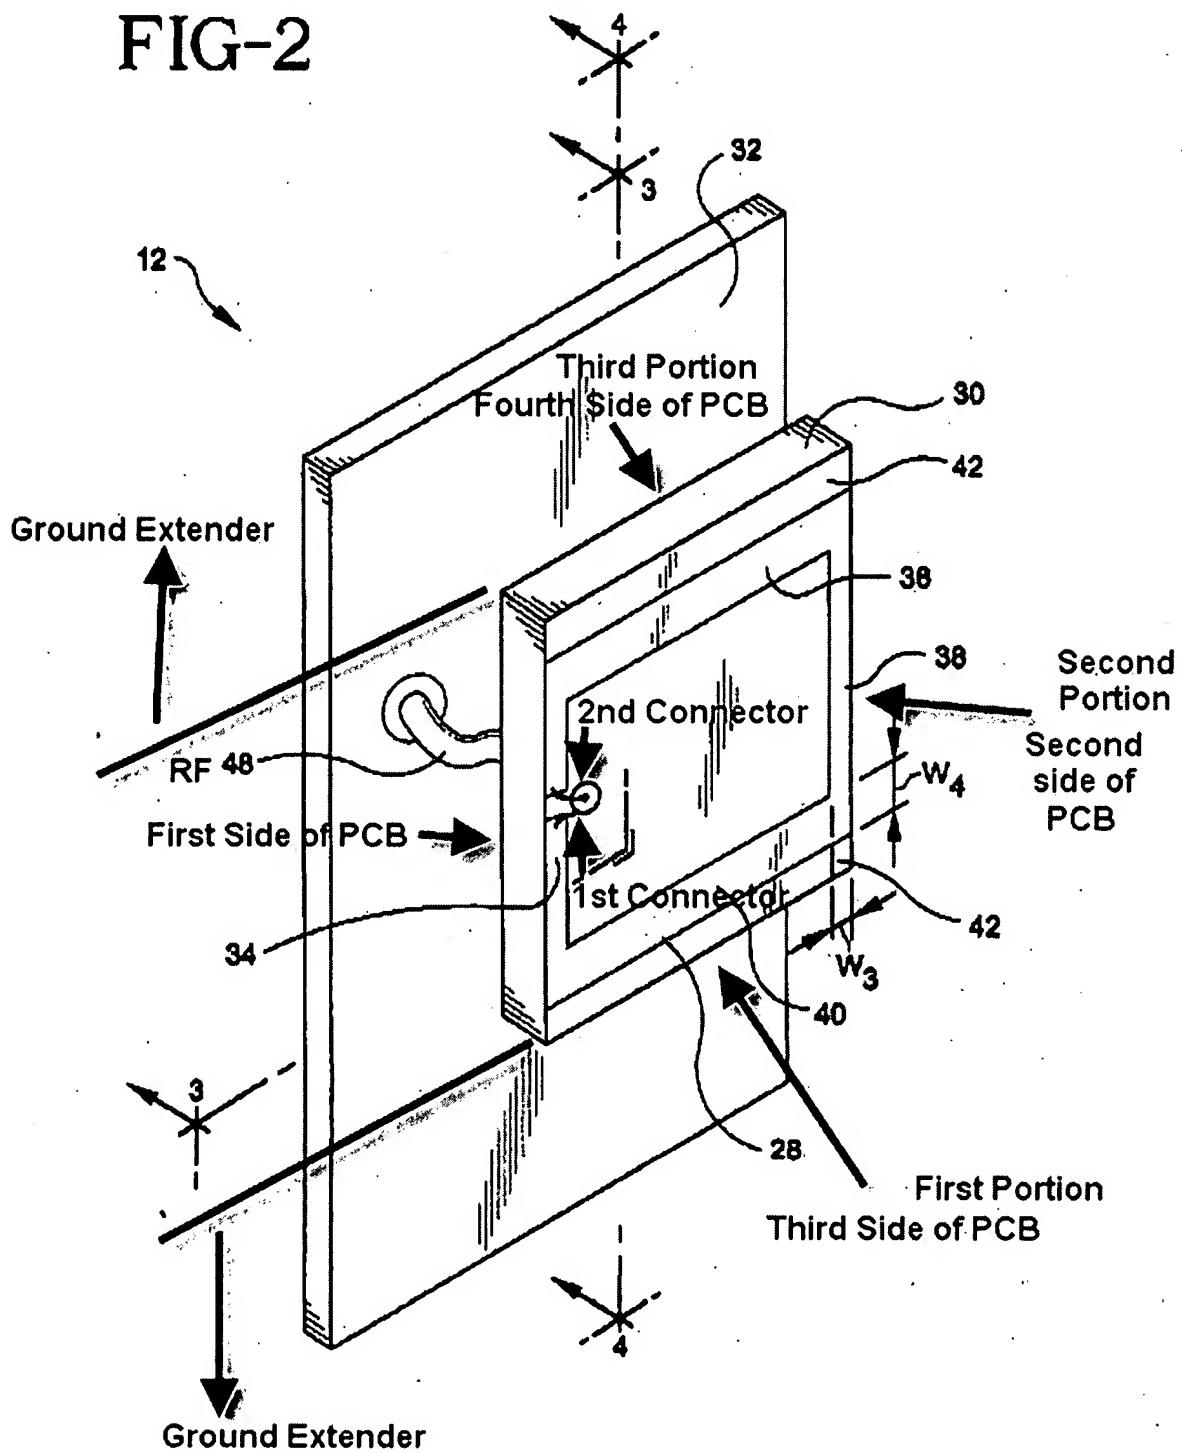

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-9 and 11-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Johson (U.S. 6,236,368 B1).

Regarding claim 1, Johson discloses in figures 1-2 an antenna for a portable device (10, 12) comprising an antenna loop (28) of conducting material (column 2, lines 61-67) having first and second ends (figure 2 shown the first and second connectors) connected to radio frequency (RF) circuit (48) and a ground plane (32) of a printed circuit board (20) (column 3, lines 60-65), respectively, the antenna loop (28) being positioned opposite the ground plane (figure 2); and a ground plane extender (figure 2 in the page 2 shown the ground extenders at the first side of the PCB) positioned at a first side (figure 2 in the page 2) of the printed circuit board and in a longitudinal extension of the ground plane (32), **wherein the ground plane extender is a separate piece from the ground plane** ( the new subject matter is rejected in the above 112 first paragraph).

FIG-2

Regarding claim 2, Johson discloses in figures 1-2 and 4 that the antenna loop (28) comprises first and second connector (figure 2) provided at a second side (2) of the printed circuit board (20) configured to connect the first and second ends (1<sup>st</sup> and 2<sup>nd</sup> connectors) of the antenna loop (28) to the RF circuitry (48) and the ground plane (32) of the printed circuit board (20), respectively.

Regarding claim 3, Johson discloses in figure 2 (page 2) that the antenna loop (28) further comprises a first portion (3) having a first and a second end (figure 2), the first portion extending a first direction along a third side (3) of the printed circuit board (20), the first end of the first portion being connected to the radio frequency circuitry (48) of the printed circuit board (20); a second portion (2) having a first and a second end, the first end of the second portion (2) being connected to the second end of the first portion (3), the second portion extending in a second direction from the third side (3) of the printed circuit board (20) towards a fourth side (4) thereof, which is opposite the third side (3); and a third portion (4) having a first and a second end (figure 2) of the second portion (2) and the second end of the third portion being connected to the ground plane (32) of the printed circuit board (20), the third portion (4) extending in the opposite direction of the first direction along the fourth side (4) of the printed circuit board (20).

Regarding claim 4, Johson discloses the printed circuit board (20) is a multi-layer printed circuit board (see figure 5) having one layer configured as a dedicated RF ground plane (32) that provides the ground plane of the antenna device (column 2, lines 45-49).

Regarding claim 5, Johson discloses in figure 1 that the ground plane extender (column 3, lines 60-65) is at least one battery cell (18), the at least one battery casing being positioned in the longitudinal extension of the ground plane (32) of the printed circuit board (figure 1).

Regarding claim 6, John discloses that the antenna loop (28) is positioned opposite a first or second surface of the printed circuit board (figure 1).

Regarding claim 7, Johson discloses that the conducting material of the antenna loop is metal (column 4, lines 50-56).

Regarding claim 8, Johson discloses in figure 2 that a U-shaped dielectric has the antenna loop etched into the dielectric (column 3, lines 35-48).

Regarding claim 9, Johson discloses that the antenna loop (28) is provided inside the printed circuit board (figure 1).

Regarding claim 11, Johson discloses in figures 1-2 and 5-6 a multi-layer printed circuit board (figure 5) comprising a radio frequency (RF) circuitry (48) and a ground plane (32) on the printed circuit board (20); an antenna device (12) connected to the printed circuit board (20), the antenna device comprising an antenna loop (28) of conducting material (column 2, lines 61-67) having first and second ends (figure 2 shown the first and second connects) connected to the radio frequency circuitry and the ground plane (32) of the printed circuit board (20), respectively, the antenna loop (28) being positioned opposite the ground plane (32); and a ground plane extender (figure 2 in page 2 shown the ground extender) positioned at a first side of the printed circuit board (20) and in a longitudinal extension (figure 2) of the ground plane (32), **wherein**

Art Unit: 2821

**the ground plane extender is a separate piece from the ground plane ( the new subject matter is rejected in the above 112 first paragraph).**

Regarding claim 12, Johson discloses in figures 1 and 5 a portable communication device comprising a printed circuit board (20) comprising a radio frequency circuitry (48) and a ground plane (32); an antenna device (12) connected to the printed circuit board (20), the antenna device comprising antenna loop (28) of conducting material (column 2, lines 61-67) having first and second ends (figure 2 shown the first and second connectors) connected to the radio frequency circuitry (48) and the ground plane (32) of the printed circuit board (20), respectively, the antenna loop (28) being positioned opposite the ground plane (figure 2); and a ground plane extender (figure 2 in page 2 shown the ground extender) positioned at a first side of the printed circuit board (20) and in a longitudinal extension of the ground plane (figure 2, 32), **wherein the ground plane extender is a separate piece from the ground plane ( the new subject matter is rejected in the above 112 first paragraph).**

Regarding claim 13, Johson discloses that the portable communication device is a head set (column 1, lines 15-19).

Regarding claim 14, Johson discloses that the ground plane extender is a battery casing (figure 1, element [18]).

Regarding claim 15, Johson discloses that a planar portion (on first side of the PCB) configured to contact the radio frequency (RF) circuitry (48) and the ground plane (32) of the printed circuit board (figure 2).

Regarding claim 16, Johson discloses that the antenna loop (28) are directly connected to the radio frequency (RF) circuitry (48) and the ground plane (32) of the printed circuit board (figure 2).

***Allowable Subject Matter***

6. Claim 10 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
7. The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record fails to teach or suggest the following limitations:

An antenna device for a portable device, the antenna device comprising the antenna device further comprises a bezel connected to the printed circuit board that extends from the third side of the printed circuit board towards the fourth side of the printed circuit board, and/or bezel flanges connected to the ground plane and extending along the third and fourth sides of the printed circuit board as claimed in claim 10.

***Response to Arguments***

8. Applicant's arguments filed September 22, 2006 have been fully considered but they are not persuasive.

Regarding claims 1 and 11-12, Applicant argues that Johson does not teach or suggest first and second ends are connected to a radio frequency circuitry and a ground plane of a printed circuit board, respectively. However, Examiner disagrees since Johson clearly discloses first and second ends (having a first and second ends at the 1<sup>st</sup>

Art Unit: 2821

Connector and 2<sup>nd</sup> connector shown in the figure 2 copy) are connected to a radio frequency circuitry (RF coax line [48]) and a ground plane (32) of a PCB (20) (having the radio frequency [48] connected between the loop antenna [28] at the first and second connectors and the printed circuit board [20] in order for receiving or transmitting signals between the circuit board and the antenna) (see column 1, lines 48-58 and column 2, lines 45-49).

Regarding claim 13, Applicant argues that Johson does suggest a hand-held device which is different with a headset as recited in presented application. However, Examiner disagrees since a hand-held, a handset, a telephone, or a cellular is a telecommunication device.

Regarding claim 15, Examiner disagrees with the Applicant's discussion in page 3 of "claim 15 is separately patentable over Johson" section. However, Johson discloses a planar portion (on first side of the PCB) configured to contact the radio frequency (RF) circuitry (48) and the ground plane (32) of the printed circuit board (figure 2).

Regarding claim 16, Applicant argues that Johson does suggest no direct connection between the antenna loop and any radio frequency circuitry. However, Examiner disagrees since the antenna loop (28) directly connected with the RF circuitry (48) as clearly shown in the copied figure in the office action.

Claims 1, 11-12, and 17-18 have been rejected under U.S.C. 112 first paragraph above.

***Conclusion***

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

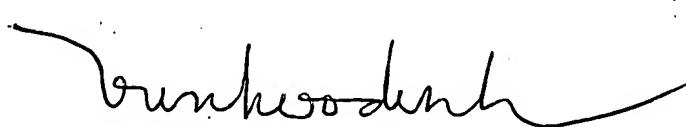

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tung X. Le whose telephone number is 571-272-6010. The examiner can normally be reached on 8:30 AM - 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Douglas Owens can be reached on 571-272-1662. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
